Summary

Backend-focused developer who loves to design and ship scalable products that matter. I enjoy solving complex real-world development scenarios and building under pressure. Hackathons have been a huge learning experience, helping me collaborate and grow as a developer by making cool products.

Education

JIS College of Engineering

Bachelor of Technology in Computer Science and Technology
(emester)

2024 – 2028

CGPA: 8.105/10 (till 2nd

Technical Skills

- **Languages:** Java, JavaScript, Python
- **Frontend:** React.JS, TypeScript, Tailwind CSS, Next.JS, UI Libraries
- **Backend:** Spring Ecosystem, Kafka, Redis, PostgreSQL
- **Tools & Technologies:** Git, GitHub, REST APIs

Projects

- **SentinelIQ @ Binary v2** [Drive](#)
 - SentinelIQ is a AI powered forensics platform that unifies scene analysis, biometrics, audio processing, and suspect identification into single real-time intelligence system. It transforms fragmented, slow investigations into rapid, data-driven decision-making by instantly synthesizing evidence into actionable insights.
- **BridgeOps @ IEM Diversion 2k26** [Demo](#)
 - BridgeOps is an extension of VS Code, that automizes everything you need for making an App. Better to call it a B2B Platform. Want to make a change in the code using AI Chat and inform other? Need to create team of developers and communicate? Need to generate issues and assign to developers? Wanna explain the whole codebases to junior developers? Want to assign tasks to users? Our platform helps you to do all that in a single window.
- **College Management System** [Demo](#)
 - A web application to manage college operations, including student enrollment, course management, and faculty administration. It has automatic attendance saver using QR Code scan, Automated Routine scheduler, and many more features.

Work Experience

- **VitaminG Studios | Oct' 25 – Dec' 25]** [Demo](#)
 - Developed the frontend for the landing page and main extension window using React and TypeScript, enhancing user interface and experience.
