SUMMARY

Backend-focused developer with hands-on experience building scalable web platforms, VS Code extensions, and AI-powered systems using Java (Spring), React, and TypeScript. Active hackathon participant who thrives under pressure – shipped multiple end-to-end products in competitive 24 – 48-hour sprints. Currently pursuing B.Tech in CS at JIS College of Engineering (CGPA 8.1/10).

TECHNICAL SKILLS

Languages	Java, JavaScript, Python
Frontend	React.js, Next.js, TypeScript, Tailwind CSS, UI Libraries
Backend	Spring Boot, Spring Security, Kafka, Redis, PostgreSQL, REST APIs
Tools & DevOps	Git, GitHub, Docker (familiar), VS Code Extension API

PROJECTS

SentinelIQ	Hackathon project · Binary v2 GitHub (Drive)
- Built an AI-powered forensics platform integrating scene analysis, biometrics, facial recognition, and audio processing into a single real-time intelligence dashboard. - Designed and implemented the backend pipeline using Python and REST APIs to ingest, process, and synthesise multi-modal evidence streams concurrently. - Delivered a fully functional prototype under 48-hour hackathon constraints, enabling investigators to cut manual evidence review time significantly.	
BridgeOps	Hackathon project · IEM Diversion 2k26 GitHub (Demo)
- Developed a VS Code extension (B2B platform) that consolidates AI-assisted code editing, team chat, issue tracking, and task assignment into a single window – eliminating context switching. - Implemented real-time developer communication and codebase explanation features using TypeScript and the VS Code Extension API. - Architected a multi-tenant role system allowing team leads to create groups, assign tasks, and onboard junior developers with automated codebase walkthroughs.	
College Management System	Personal project GitHub (Demo)
- Built a full-stack web application handling student enrollment, course management, and faculty administration using React (frontend) and Spring Boot (backend). - Implemented QR-code-based automatic attendance tracking, reducing manual entry effort. - Designed an automated routine scheduler that resolves timetable conflicts and notifies stakeholders in real time.	

WORK EXPERIENCE

VitaminG Studios	Oct 2025 – Dec 2025
Frontend Developer Intern	
- Developed the landing page and main extension window UI using React and TypeScript, improving visual consistency and user experience across the product. - Collaborated closely with the design and backend teams to translate mockups into responsive, accessible components.	

- Refactored existing component structure to improve reusability and reduce render overhead.

EDUCATION

JIS College of Engineering

2024 - 2028

Bachelor of Technology in Computer Science and Technology · CGPA: 8.10/10 (till 2nd Semester)
